Welcome to the C4 Architecture Model Miro template!

The C4 model is an approach to architectural diagramming that uses four levels of abstractions:

- **Context**: the highest level view of a software system, a starting point showing the system in the context of the world
- **Container**: the applications and data stores that make up the software system
- **Component**: a grouping of related functionality encapsulated behind a well-defined interface within a Container
- **Code**: the implementation details of a Component, as shown in UML class diagrams, entity relationship diagrams, etc. Code diagrams are optional and typically auto-generated by development tooling. An example is not included here.

Instructions for Use of this Miro template

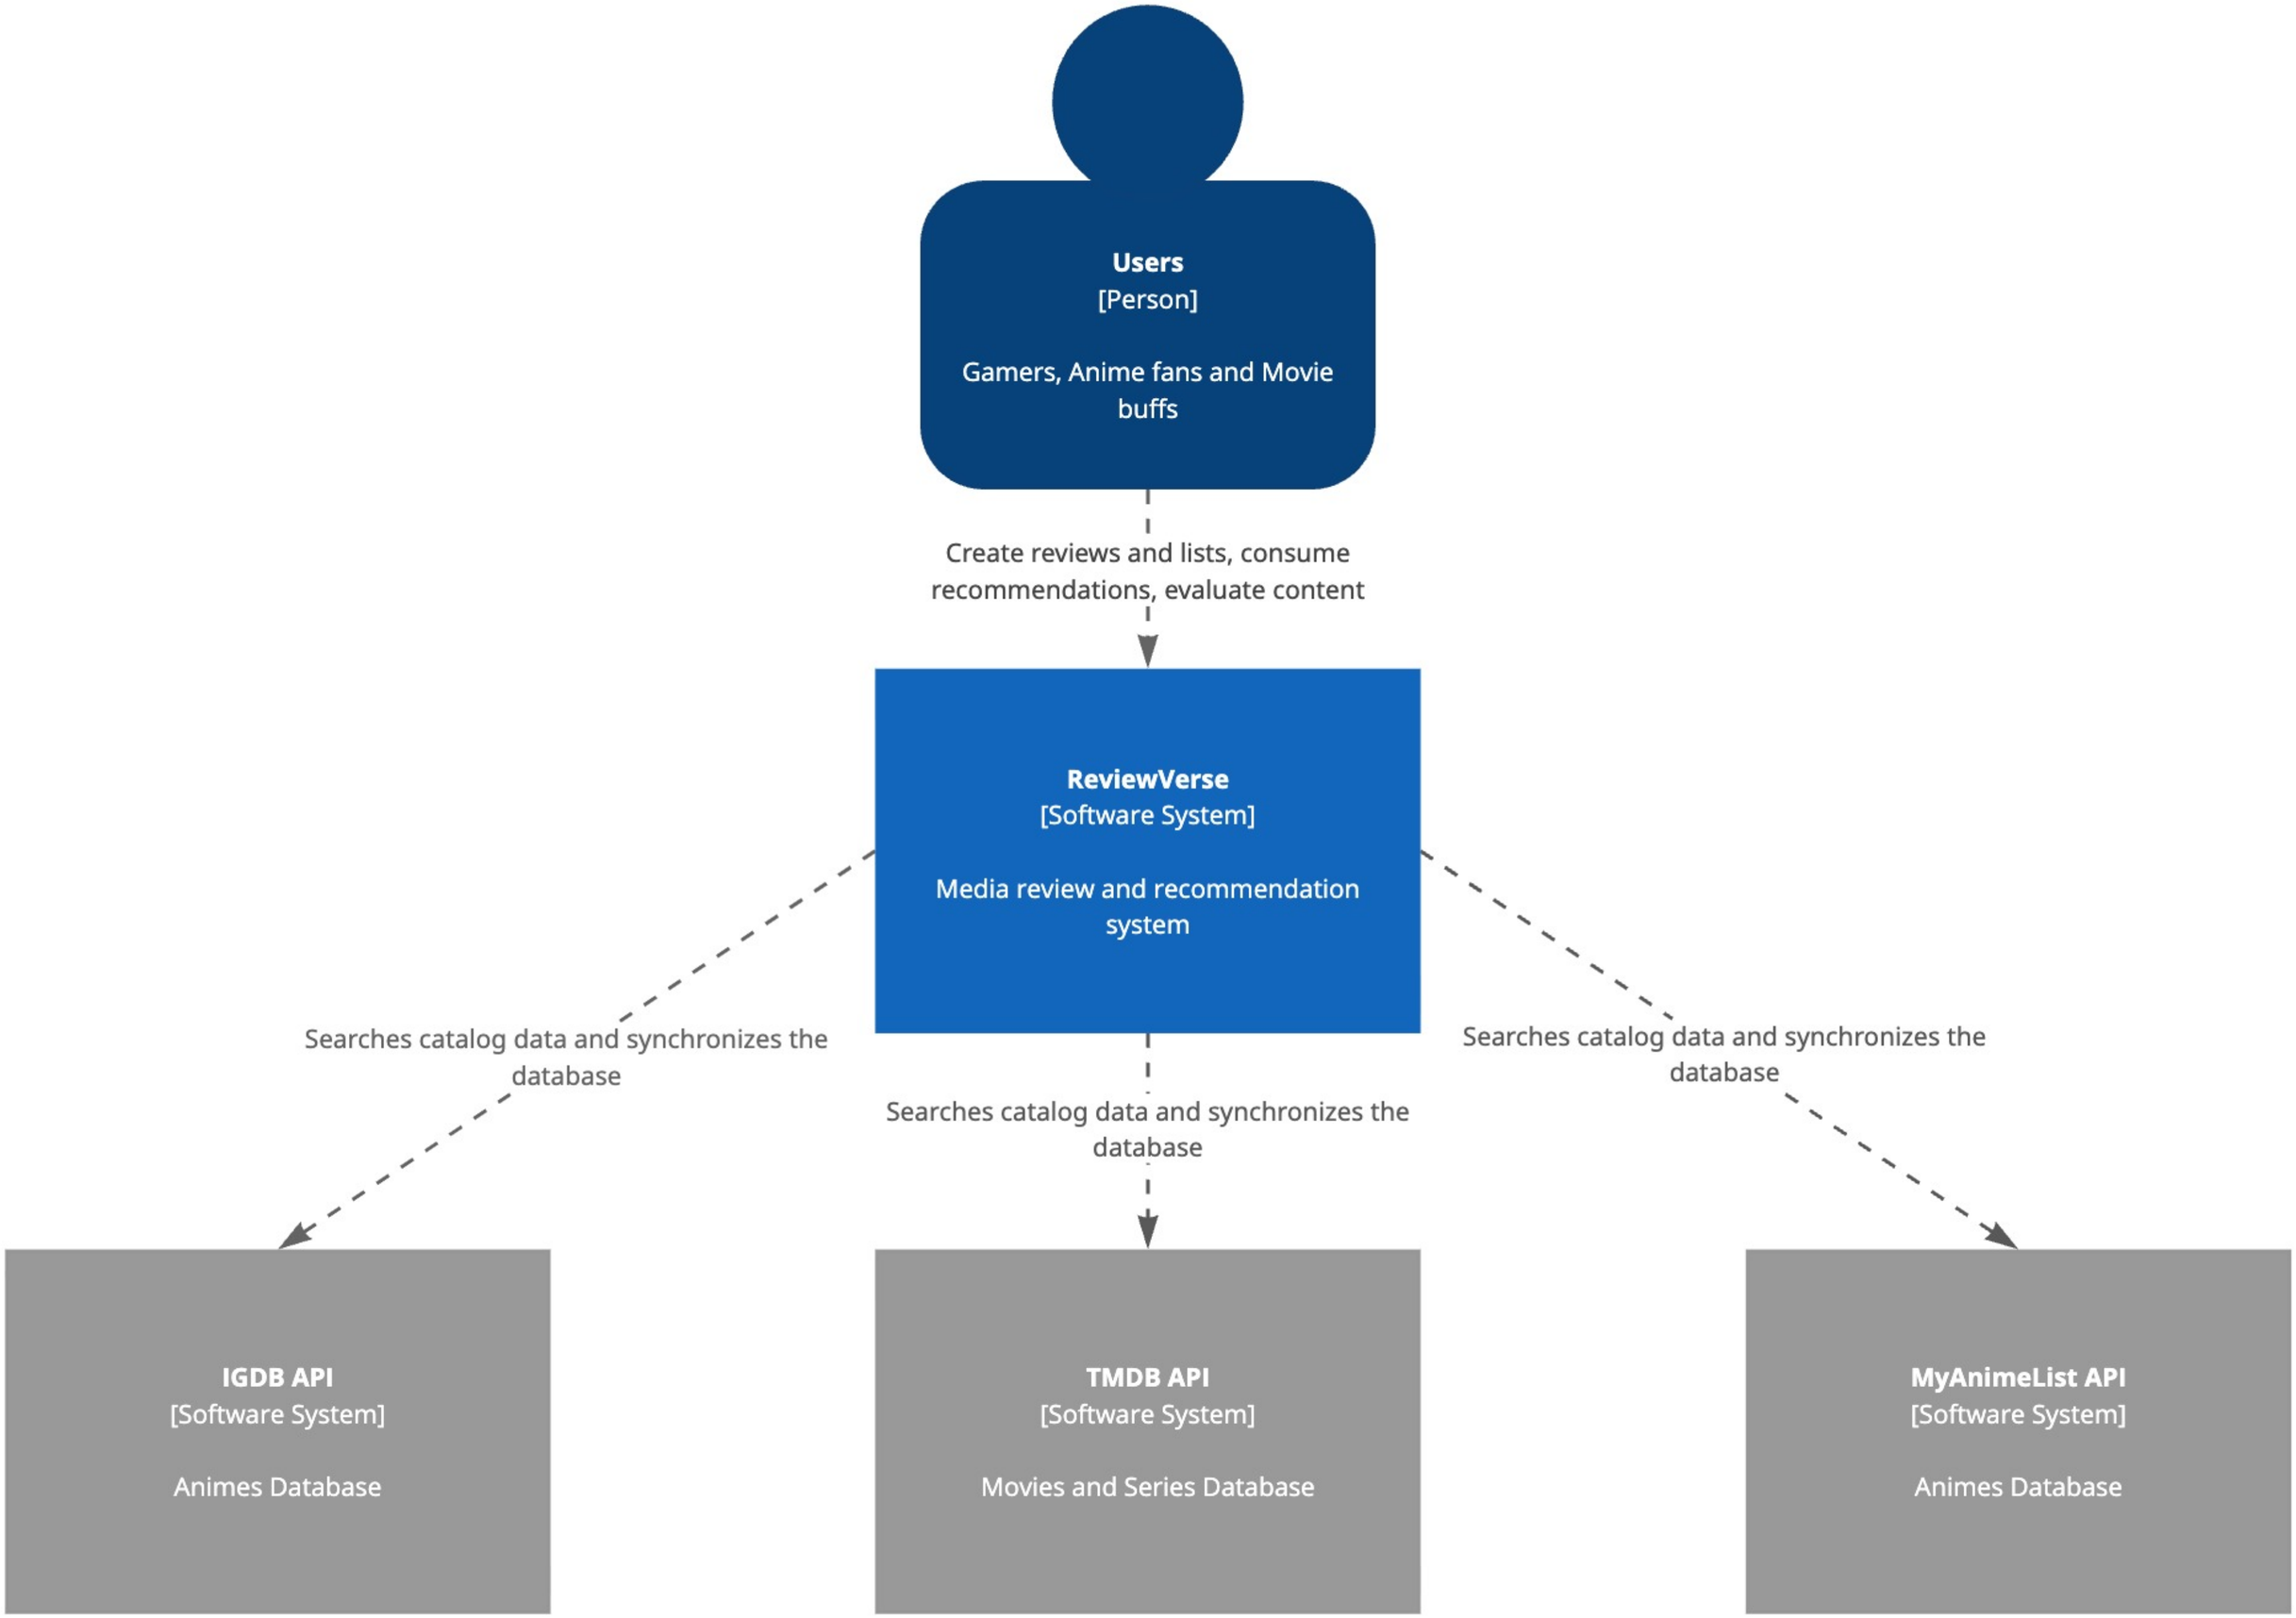

1. Start by adapting the Context diagram to your software system: add actors (persona, devices, etc.), external systems, and the name and description of your software system. Label relationships with their intent and technology/protocol.
2. Adapt the Container diagram to your software system: add containers for applications, data stores, and other subsystems within the system block. Be sure to re-use actors and external systems from the Context diagram.
3. Copy and adapt the Component diagram for each container, at least those that require further explanation. Be sure to re-use dependent containers and external systems from the Container diagram.

Single-Page Application
[Container: JavaScript and Angular]

Provides all the Internet Banking functionality to customers via their web browser.

Mobile App
[Container: Xamarin]

Provides a limited subset of the Internet Banking functionality to customers via their mobile device.

makes API calls to
[JSON/HTTPS]

makes API calls to
[JSON/HTTPS]

makes API calls to
[JSON/HTTPS]

makes API calls to
[JSON/HTTPS]

makes API calls to
[JSON/HTTPS]

API Application
[Container]

Sign-In Controller
[Component: Spring MVC REST Controller]

Allows users to sign in to the Internet Banking System.

Reset Password Controller
[Component: Spring MVC REST Controller]

Allows users to reset their passwords with a single URL.

Accounts Summary Controller
[Component: Spring MVC REST Controller]

Provides customers with a summary of their bank accounts.

uses

uses

uses

uses

Security Component
[Component: Spring Bean]

Provides functionality related to signing in, changing passwords, etc.

E-mail Component
[Component: Spring Bean]

Sends e-mail to users.

Mainframe Banking System Facade
[Component: Spring Bean]

A facade onto the mainframe banking system.

reads from and
writes to
[JDBC]

sends e-mail using
[SMTP]

makes API calls to
[XML/HTTPS]

Database
[Container: Oracle Database Schema]

Stores user registration information, hashed authentication credentials, access logs, etc.

E-mail System
[Software System]

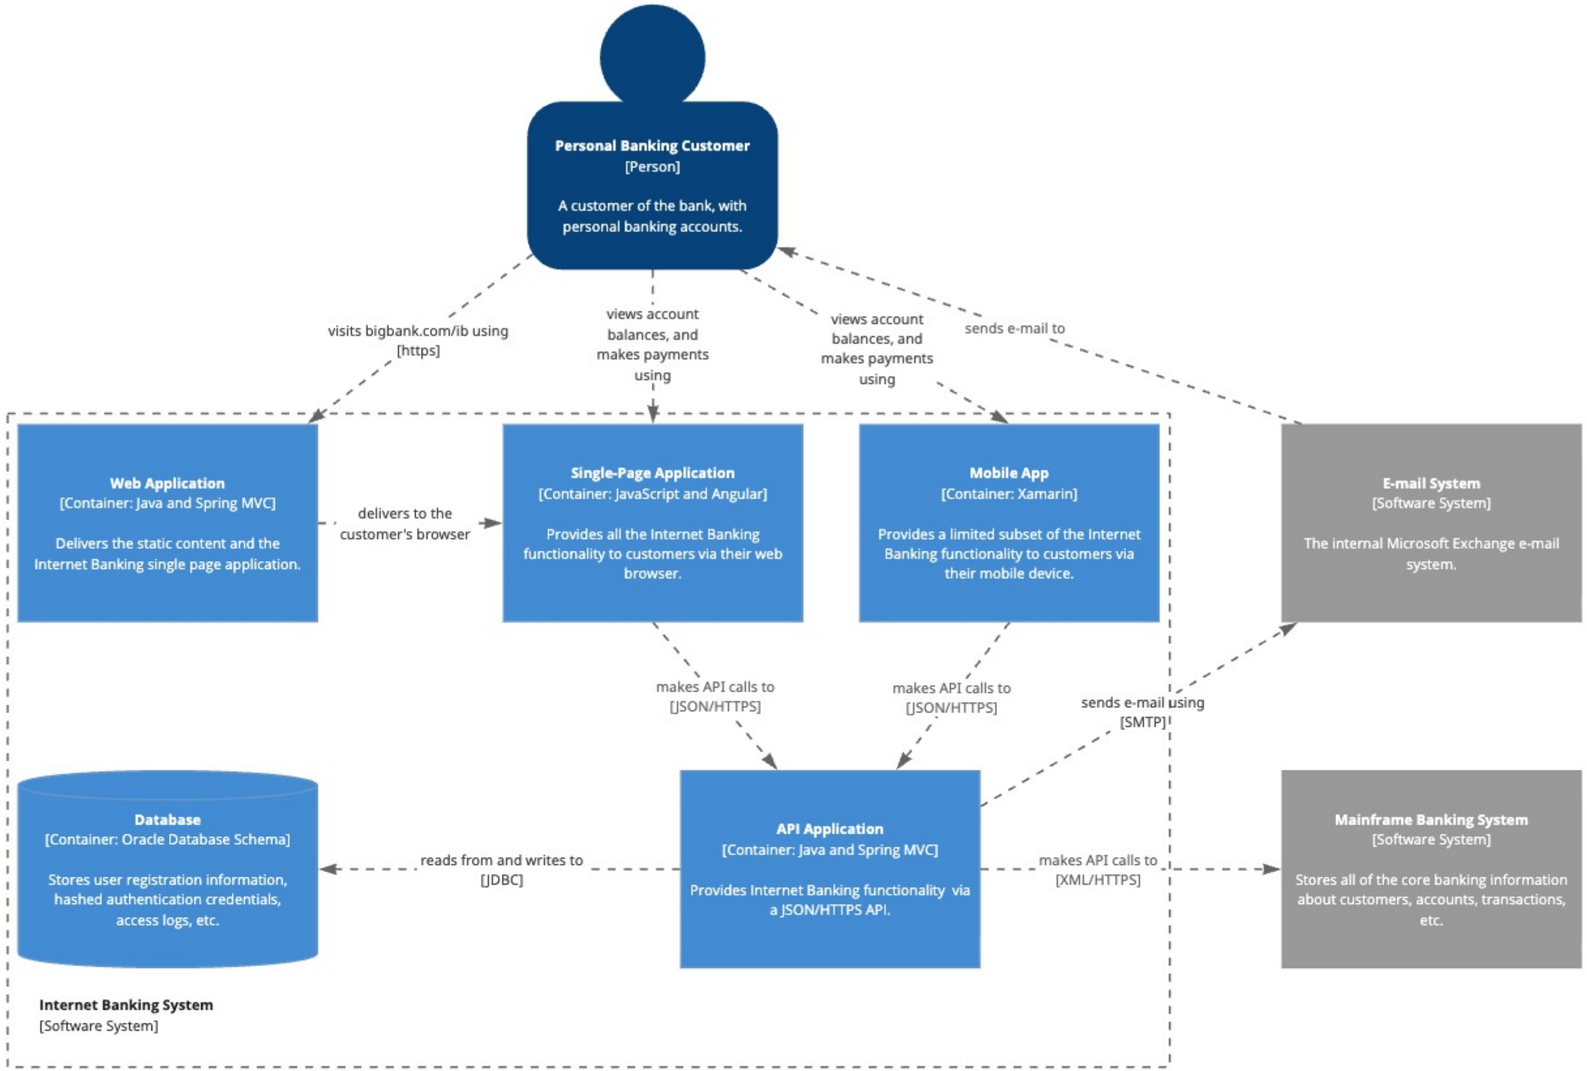

The internal Microsoft Exchange e-mail system.

Mainframe Banking System
[Software System]

Stores all of the core banking information about customers, accounts, transactions, etc.
